WOLCOTT PARTY LEAVES.

Maps and Documents That Foretell a Deal in Bingham

Impressed by the resources of Utah as never before, and with a roll of maps and minutiae, the significance of which it would be impolitic to divulge at this time Hon. Edward O. Wolcott and his brother Henry, Hon. Dennis Sullivan and J B Henry, Hon. Dennis Sullivan and J. B. Harriman departed for Colorado last night in their private car, with much to foretell their return in a short time or as soon as they are signaled by Hon. Samuel Newhouse, whose guests they have been. Host of the day was devoted by the distinguished visitors to the study of maps and data pertaining to territery at Bingham, and while something is known, perhaps, of the quarry that brought them so unexpectedly to Utah, it would be unfair to flush it at this time. Local interests may rely on it, however, as big game, with those seeking it fully equal to the chase.

with those seeking it fully equal to the chase.

With the result of their observations at Bingham the visitors all expressed their astenishment. The enormous are bedies of the Highland Boy or Utah Con. at which the evolution of Bingham as a camp of copper was begun by none other than Samuel Newhouse, afforded a revention for which none of the party was prepared, while Bingham as a whole, with over 10,080 tons of ore coming monthly from its diggings appealed to them as a camp of great possibilities.

Commenting on conditions in Colorado, former Senator Wolcott said that while they had been unsettled by labor troubles, with every interest required to suffer for a long time, they are gradually recovering and the record for the last quarter of the year will reflect a most prosperous condition.

prosperous condition.

MADE NEW RECORD.

Splendid Results at the Utah Copper Company's Big Mill.

From the big mill of the Utah Copper ompany in Bingham canyon there was company in Bingham canyon there was forwarded during the day to the fermaces of the Bingham Con. smeller another 190-ton lot of concentrates ronning almost sensationally high in copper, with a fine product in gold and silver. During the month of October the management has produced approximately 800 tons of con centrates, and will continue, and Mr. Jackling yesterday, to produce at the rate of thirty tons daily. In achieving these results, Superintendent Janney is operating forty tables and fifty-two van ners, with one slimer, the machinery contained in the plant doing its work with faultless precision. The ores upon which it is running are maintaining the usual average and that the undertaking will be productive of divisions less than a year hence is now practically assured. Meanwhile the management of the oroperty is seriously contemplating the development of resources known to exist in the Alf's Well ledge, by which its territory is also traversed and from its neighbor is now raising some of the best ore of which the camp of copper is capable. Whether or not this development will be through the neighbor's workings or an independent shaft by the Utah commany, the result of negotiations now in progress will determine. forwarded during the day to the fernaces

ITS WEALTH INCREASES

New Ore Body in Scottish Chief Is Widening Out.

A telephone message eccited by Walter Shoup, secretary of the company, from the management of the Scottish Chief at Park City vesterday morring, advises him Park City vesterday moreling, advises him of the presence of three feet of chioride ore in the bottom of the winze now dropping down on the channel, and with auch to denote a larger body at greater cepth. Manager W. J. Lawrence, who is glying his undivided attention to the development, is now running out a shipment from the new body, with which he aspes to reach the furnaces on or before November 10, while two carloads of lead ore will be marketed in the next few hours.

MONTH ON 'CHANGE

Sprinting of the Youngsters Affords a Pile of Scalps.

The month on the mining exchange Pronounced Increase Over Corresponding Period Last Year With Greater One Coming.

The crop of copper of which the toposer plants in Salt Lake valley were productive during the month just stripped from the calendar, tipped the scales at 1,27,34 pounds, this compared with 2,65,200 pounds for the corresponding month in 120. In addition to the output of this metal at the ultra-copper furnness, sithough every pound of the product is associated with its units of gold and silver, there was contained in the matte sent forth by the American Smelling and Refning company about 580,000 pounds, with a total copper production for the month of 427,384 pounds, or at the cate of over 52,000,000 pounds per samum. Pive years are boiled to was so insignificant that but brief-er reference was made by the datalitical to its presence in the ores of the State. That more striking gains will be made in the production of this class, of buillion within the next risery lays; three is no doubt whatever. Not one of the plants at which copper ores are busing reduced but is capable of a greater tonnage than that now being to the State. October's Exhibit in Open Market

Settlements on Ores and Bullion Exceed All Previous Records in State's History.

October in the ore and buillon market closed on settlements aggregating \$2,26,511, a record that is unprecedented, and yet the producer in not a few of the diggings is subordinating the output of ore to development and waiting on the valley for additional furnaces. During the corresponding month of fast year the settlements, through the same channels, amounted to \$2,12,335, and while the gain is a small one, it by no means reflects that which would have been recorded had production gone on unrestricted. However, the exhibit cannot but impress the investor with the resources of the State, and appeal to capital with greater emphasis than ever before. To meet the requirements of the producer, indeed, he has the arsurance of Vice-President Barton Sewall that the American Smelting and Feffining company has in contemplation subrements if not an addition. ton Sewall that the American Smelling and Refining company has in contemplation enlargements if not an additional plant, that will incur a further outlay exceeding \$1,000,000 in Salt Lake valley, nor has this been projected without reference to the enormous volumes of ore that embolden it.

The day in the open market closed on settlements amounting to \$55,000, McCornick & Co reporting them as they follow:

low:
American bullion 348.700; gold bullion, 8239, gold, silver, lead and copper ores, 543.700.

In the metal market silver ruled at 58½ cents an ounce, with lead stationary at \$2.5061.20 per hundred pounds, while casting copper moved its peg up a notch, and ruled at 12% cents a pound, with the talent predicting a 13-cent market before the expiration of the year.

OCTOBER DIVIDENDS

Fine Exhibit Notwithstanding Absence of a Number.

The dividend record during the month closed on a total of \$212.500, notwithstanding the fact that some of the bread-makers have sussended their distributions that needed developments might be prosecuted and more coonomic outlets for the wealth of their minea established. As usual, the column was led by the great Silver King of Park City, which passed around \$100.000, and added a few dollars to its stupendous surplus, while Dally West came forward with \$72.000 and Mammoth with \$20.000, the roster closing as follows:

Annie			ie:		N	ă	2		ě	i	8	\$ 12.50 72.00

OFF FOR NEW DISTRICT

Group of Gold Claims Running High in Values, South of Goldfield.

Special to The Tribune.

Special to The Tribune.

CALHENTE, Nev., Get. 31.—W. J. Scotheid, who recently sold his big ranch at Paranaget Valley to J. P. Gardner of Salt Lake, accompanied by A. E. Hyde of Salt Lake, and an assayer with a complete assaying outfit, started from Callente Thursday with a load of supplies for the new district lying south of Goldfield, where they have located a group of gold claims. They have a three-toot ledge opened up, from which assays of 230 ounces in gold and 1300 ouncers silver have Leen taken. The ore is a porphyritic quartz and gives every indication of increased values with development.

W. J. Bean of Richfield, in company

W. J. Bean of Richfield, in company with Judge McCarty of the Supreme beach in Salt Loke, passed through camp today en route to Las Vegas. Thence they will visit a group of mines owned by Mr. Bean, thirty-five miles northwest of the Vegas, for the purpose of examination and development. The vein in these ledges is eighteen inches while at grass roots, and carries values of 90 per cent steel galena, in time formation.

John P. Burwell and Morton Syles, who

John P. Burwell and Morton Sykes, who located the Galena group of milites, thirty-four miles north of Moaps, have just struck a four-fogt vein of gold-silver cre at a dopth of sixty-seven feet, in a tunnel now in 150 feet. They have taken out about five tons of this ore, which will assay about \$100 in all values. They are now drifting on the vein both ways and expert soon to make a shipment to Salt Lake for treatment.

Prices Boiling in Boston

Special to The Tribune.

BOSTON, Mass. Oct II.—Another day of boiling prices in the Boston market, but the tendency was not all one way. Early prices were very high, many buying orders being in evidence, but as soon as these had been filled the market receded and prices toulght are considerably below those of the early morning. Profitching was responsible for the reaction, which is considered by many as a good thing, for the market was going almost too fast to be healthy. Today's set-back has taken out a good many weak holders who will be in evidence as soon as the market starts again. The closing was irregular. Hornblower & Weeks, brokers. Special to The Tribune. 3 State street, Boston, and 10 Wall treet, New York, furnish the following

THE MILLER STRIKE

Development Smacks of Palmiest Days on Properties.

Judge Baskin, one of the owners in the Miller mines in American Fork canyon, says, after a personal examination of the recent strike in the Wyoming claim, that it is all that has been represented and that the ore body promises to reproduce the story of early days in that property, which has a million-deliar bullion record. The lemsees are breaking down ore which affords an average of about 350 without sorting whatever, while the body is one of the strongest that has been uncovered in that region. The Judge is quite enthusiastic and predicts a very heavy output as work advances.

Got an Option on Bullfrog Mines

Utah Talent Again Invades Nevada and Returns With Big Group in Its Bootleg.

John A. Kirby, consulting engineer on the staff of the Daly West mines, Park City, who has been chasing bonanzas in the region of which Goldfield, Nev., is the center, is back from the west with an option on a group of claims at Bullfrog, one of the cluster of camps that is as tonishing the world. Mr. Kirby went west as the representative of a powerful local syndicate to whom the results of the examination will be submitted, the fate

local syndicate to whom the results of the examination will be submitted, the fate of his option to be decided by it. With the result of his observations at Bullfrog. Mr. Kirby is quite favorably impressed. The ledges, in which occur some ores of value as sensational as those of Goldfield, are well defined, are far up on the mountain sides and, through tunnels, may be tapped at a considerable depth. Some of the rock taken from these ledges by him afforded values that are most astonishing, while the whole reveals an average that compares favorably with anything in the region. Just what figures are required to handle the option Mr Kirby would not divulge, although it is known that they are large ones.

At Goldfield Mr. Kirby was afforded access to all of the larger mines, and, to the testimony of all others who have examined them, adds that they are among the most wonderful he has ever seen.

At Tonopah he was permitted by the management of the Montana-Tonopah mines to make an inventory of their wealth. While he had an intimation of the company's resources and the large volume of high-grade ore that is exposed within its properties, he was not prepared for the large amount of wealth that is now exposed. On the 5%-foot level the crosscut is now approaching the McDonald voin, connection with this to be made at a point about 209 feet below the main stone above. The ledge at this depth maintaining the same strength and the ores the same quality as those above. Mr. Kirby says the wealth of the Montana-Tonopah will have been doubled; in other words, it will put the company in possession, according to his estimate, of ores of the value of at least \$6,00,000. With Tonopah Mr. Kirby was very much pleased, and in his opilion it will have soon become one of the most productive of Western camps.

PORTER AT GOLDFIELD.

Gus Holmes Embraces the Big Lize-Ores in Great Bend

Quite exultant over the manner in which the properties of the Great Bend Mining company at Goldfield, Nev., are responding to development, Peter Porter. one of the founders of that undertaking, was at his desk again yesterday. The work at the Great Bend is being prosecuted by Vivian P. Strange, formerly identified with some of the larger properties at Bingham. In the drift at a depth of seventy-five feet from the surface he is encountering ore that shows not a few "colors" in the yellow metal, this occurring in a ledge no less than afteen feet between walls, and while the sacking of ore has not yet begun, there is much to indicate that it will begin in a short time. While this work is going on in the shaft. Manager Strange is driving a tunnel from a point 150 feet east. In this avenue he has also uncovered ore that is panning well. Still farther east an incline is being put down with the dip of the main ledge. In the breast of this channel there has been exposed a sixinch streak of ore, assays of which show from \$190 to \$250 gold per ton.

Discussing the purchase by Gus Holmes of this city, Mr. Porter says that he has undoubtedly, in the Big Lize claim, acquired one of the most valuable blocks of ground in that camp. The claim lies between the Tonopah Club group, from which very high grade ore is now being taken, and the Sandstorm mine, in which there is another very impressive showing. face he is encountering ore that shows

there is another very impressive showing. The ledge in the Big Lize is an equally strong one, and while pay dirt has not been encountered, the mineralization is

strong one, and while pay dirt has not been encountered, the mineralization is very pronounced.

W. H. Clark has made his first payment on the Tin Horn group, two miles east of Goldfield, and is now opening up the ledge. Some very good ore has been uncovered by him in the property while west of his ground ore showing \$2200 per ton has been encountered. Of this class of ore twenty inches was revealed at a depth of three feet, and for the claim a San Francisco crowd has just paid as much as \$60,000. It looks as if Mr Clark and his Salt Lake associates had acquired another of Goldfield's prizes. In the Vernal property which was recommended by Steve Baldwin to Salt Lake and Tonopah parties, good ore has been uncovered and shipments will no doubt begin in a short time. Among these who are sharing his good luck are Measrs. C. W. Whitiey and George Gunn of this city Charles E. Knox and Frank Keth of Tonopah. The same crowd is exploiting a lease on the Mohawk mine, with good results.

Mr. Porter spent several days at Gold.

of Tonopan, The same crown is exploiting a lease on the Mohawk inne, with good results.

Mr. Porter spent several days at Gold Crater, southeast of Goldfield, where he found a number of very meritorious discoveries, some of the ore showing a valuation of \$100 per ton. He also visited Coyote Springs, where he was shown eighteen inches of ore, the assay value of which was \$130 per ton.

Of the Vindicator mines, that are being developed by a Sait Lake company, Mr. Porter says they are clearly within the mineral-bearing horizon and that, with systematic work, they should be made productive. Pannings of the rock taken from this property certainly testify to the presence of gold. The camp, as a whole, is ablaze with excliement, the mines are sustaining it in a most generous minuner, and the close of the year will undoubtedly witness a record that has never been equaled in so short a period. Mr. Porter will return to camp within the next two weeks and will remain indefinitely.

Send today for a book which will inspire any man to be strong and vigorous—a book you will like to rend. It tens now to cure weak men, and gives illustrations of the effect of my belt upon weak, nervelies men, I send the book, sealed, free, if you inclose this ac.

DR. M. T. MLAUGHLIN.

\$\text{\$\

AT KEARNS-KEITH MILL.

New Improvements About Completed -Daly West Drills.

The Record, telling of the week at Park City, says that at the Kearns-Keith mill the improvements in the engine and boller-rooms are about completed. The partition between the two has been removed and the compressor is in place. The

Get some knowledge of it Write for our Knowledge Book, A Schilling &

venience and looks of the plant, which is

venience and looks of the plant, which is now one of the best-equipped of any of the smaller properties of the camp. The mill is grinding away steadily and is turning out first-class concentrates.

Arrangements are being made at the Daly West for the installation of all hammer rock drills. The machine is virtually a hand drill which is operated by compressed air instead of the usual hammer one of these machines, operated by a single man, can do the work of four men working double-handed, so that an idea of the saving in time and expense effected by their use may be gained. They are now being tried in the mine as an experiment and are working perfectly, so that the new drills will be installed permanently in the near future.

At the Diamend-Nimrod drifting on the Sio-foot level continues steadily. It is the intention to continue work all winter.

H R. Stevenson and Lou Balley, two compolent and well-known mine and mill contractors, left yesterday for Bingham, where they will build some large ore blue for one of the big companies in that camp. The water is now all out of the Comstock mine and work is going steadily ahead. It is a noticeable and encouraging fact that the ore is growing richer and richer as depth is attained, this fact fore-telling greatness for not only the Comstock but numerous other Thaynes canyon properties.

Mining Notes.

Mining Notes.

Willard F. Snyder of the Honerine left or its Stockton mines and mill yesterday norming to inquire into developments that have been made during his absence in the

Capt. Duncan MacVichle, general manager of the Bingham Con.'s interests, has gone to Chicago, from which point he will continue to Boston to confer with President White and other of the company's officials.

Frank L Gardner has returned from Pioche, Nev. where he made an examination of the Pioche-Nevada company's properties and verifies all that has been said of conditions and the company's came.

Manager J. M. Reynolds of the Wasatch King has returned from that Beaver county proposition, bringing with him samples of ore showing as much as 33 per cent copper, with some gold.

Manager Tony Jacobson of the Columbus Con. has returned from that Alta property and reports the new concentrator performing its work in most satisfactory manner, with concentrates now issuing from its tables.

Henry M. Crowther, general manager of the Continental-Alia, was scheduled to return from camp last night.

Lufayette Hanchett, financial manager on the Newhouse staff, has returned from Colorado. J. M. Callow, the mechanical engineer, nas returned to Montana.

Considerable first-class ore is now com-ng from the Buckhorn mines in Ophir

The Engineering and Mining Journal of New York says: "An interesting development is the unprecedented rise in American Smeiters, the common stock selling up to \$\tilde{E}_{2}\$ and the preferred to \$115. It is believed that, aside from the improved earnings of the company, the bullish feeling in the shares has been created by the amexation to the business staff of the United Lead company of Vice-President. Stevens, of the National Lead company, who had charge of this company's sales department, and of General Superintendent McCarty of the Atlantic branch of the National company."

Richard H. Sheldon, who is mining ex-

Richard H. Sheldon, who is mining ex-tensively in Idaho, came down from that camp Sunday and left with the Wolcott party for Denver last night.

Manager Joseph of the Silver Shield leaves for that Bingham proposition this morning. It was said last night that the main ore body has been reached.

main ore body has been reached.

The Utah of Fish Springs will sell a car of ore today on controls showing 101 ounces silver and 44 per cent lead.

Superintendent H. E. Van Housen of the Copper Belt rallway, who was in from Bingham yesterday, says October will reveal a new record in the tonnage of ore over that line.

Manager C. A. Falco of the Cluster of Blugham was in from camp yesterday, much pleased with the condition of its ore bodies.

Gien R. Bothwell, manager of the Sacra-mento, left for that Mercur property yes-terday morning.
